Situation Cell Overview

Critical fire weather conditions and potentially damaging winds continue from the southern Sierra to the coastline of Southern Region through this evening. Southern California Edison (SCE) and San Diego Gas and Electric (SDG&E) have activated public safety power shutoff protocols to mitigate the risks of large fires.

Key Points

- SCE is currently at De-energization Initiated PSPS Stage.
- SDG&E is currently at Initiating Re-energization Patrols PSPS Stage.
- Pacific Gas and Electric (PG&E) has deactivated their EOC as they no longer see a risk in the 12/9/20 potential weather event.
- PG&E cancelled the 12.07.20 PSPS event without de-energizing any customers.
- Critical fire weather conditions could lead to rapid spread of any new fires.
- Several new fires have started in the Southern Region.

Potential Impacts

- High winds in combination with dry surface fuels bring critical fire weather conditions.

Weather

Northern California Geographical Coordination Center (Northern GACC):

Dry in most areas with a chance of light showers in the northern portions Thursday through Saturday. Temperatures will be 5-10 degrees above normal Wednesday and then cool Thursday through Monday. Strengthening north to northeast winds Wednesday night into Thursday morning with peak gusts of 25-35 mph favoring the Sacramento Valley and Foothills, northwest mountains, and the lower west slopes of Cascade Sierra Ranges. Relative humidity values will be lower Wednesday into Thursday but then rise again by the weekend. Confidence in weekend precipitation is moderate due to recent model fluctuations in intensity and coverage.

Southern California Geographical Coordination Center (Southern GACC):

The large fire threat will decrease significantly across the entire region Wednesday as winds become localized. There will be local northeast to east winds of 10 to 20 mph with gusts to 35 mph across the mountains and below the canyons and passes of Southern California Wednesday morning. Minimum humidity will remain in the single digits and teens through Wednesday and humidity recovery will remain poor tonight. Minimum humidity will increase to mainly between 15% and 30% Thursday through early next week and nighttime humidity recovery will become good. There will be west to northwest winds of 20 to 30 mph with gusts to 50 mph across the mountain ridges and desert passes Thursday afternoon into Friday morning. Northerly winds of 20 to 30 mph with gusts to 50 mph will surface across Santa Barbara County and the Grapevine each night from Friday through early next week. These winds will be accompanied by high humidity. No precipitation is expected across the region for the next 10 days. Expect moderate to heavy initial attack today and then light initial attack activity Wednesday through early next week.
